2024 KEY ENERGY STATISTICS

FOREWORD

The Key Energy Statistics (KES) presents the country's annual designated energy statistics on energy supply and demand. It is published to provide the public with a timely, accurate, and comprehensive overview of the country's energy sector, fostering greater awareness and appreciation of its developments. We hope that this publication will serve as a valuable resource for energy research and studies, and as a useful reference for policy formulation and decision-making.

The KES is the product of close collaboration between the Department of Energy (DOE), and energy data users and producers.

The Policy Formulation and Research Division (PFRD) of the Energy Policy and Planning Bureau (EPPB) serves as the lead division responsible for the preparation of the KES, with data inputs from various DOE bureaus.

Energy and Environment

Environmental Emission Indicators

GHG emission is expressed in carbon dioxide equivalent (CO_2e) which accounts for the global warming potential (GWP) of methane (CH_4) and nitrous oxide (N_2O), as prescribed by the Inter-governmental Panel on Climate Change (IPCC). GWP is the ratio of the warming resulting from the emission of one kilogram of a greenhouse gas to that of one kilogram emission of CO_2 over a fixed period of time (i.e. CH_4 and N_2O GWP is 21 times and 310 times the CO_2 emission, respectively).

Indicator	2023	2024	GR
GHG emission-to-GDP ratio (tCO_2e/PhP 100K, 2000=100)	0.72	0.73	1.1%
GHG emission per capita (tCO_2e/person)	1.36	1.44	5.9%
GHG emission per Electricity Generation (tCO_2e/MWh)	0.76	0.77	0.4%
GHG emission per Oil consumption (tCO_2e/TOE)	2.73	2.73	0.2%
GHG emission per TPES (tCO_2e/TOE)	2.32	2.35	1.4%

2024 Notes:

a) Electrification Rate = Served HHs/Potential HHs;

b) Potential HHs is based on PSA Census on Population and Housing projected and adjusted (CPH 2020 for 2024);

c) Unserved HHs = Potential HHs - Served HHs

d) Projections were agreed by NEA and NPC.

Glossary

Condensate	Liquid hydrocarbons separated from gas production.
Dependable Capacity	The capacity that can be relied upon to carry system load for a specified time interval and period, provide assumed reserve, and/or meet firm power obligations.
Electrification	Electrification is either done through grid or off-grid connection. When a barangay is provided with electricity through grid connection, it means that the distribution line has reached the barangay proper. It may also mean that almost 50.0 percent of potential households in the barangay are connected to a distribution utility (DU) (i.e. MERALCO) or at least one is connected to other DUs. Off-grid connection pertains to a barangay having about 20 to 30 households availing the connection.
Energy Intensity	Calculated as units of energy (million tons of oil equivalent, MTOE) per unit of GDP (in billion pesos).
Energy Per Capita	Amount of energy used per person. It is calculated as total primary energy demand (in MTOE) over population (in millions).

Energy Self Sufficiency	The ratio of the country's domestic energy supply to total supply; measures the degree at which domestic energy forms can support total energy demand.
Energy to GDP Elasticity	The percentage change in energy supply to achieve one percent change in national GDP. Calculated as the ratio of growth of primary energy demand over GDP growth.
Gas (or Natural Gas)	A naturally occurring mixture of hydrocarbon and non-hydrocarbon gases in porous formations beneath the earth's surface, often in association with petroleum. The principal constituent is methane.
Geothermal Energy	Energy generated by heat stored in the earth, or the collection of absorbed heat derived from underground in the atmosphere and oceans.
Gross Domestic Product (GDP)	Total market value of all final goods and services produced within the country in a given period of time (usually a calendar year), or the sum of value added of all final goods and services produced within a country in a given period of time.
Gross National Product (GNP)	The value of all (final) goods and services produced in a country in one year, plus income earned by its citizens abroad, minus income earned by foreigners in the country.

Hydropower	Also called hydraulic power or water power; derived from the force or energy of moving water, which may be harnessed for useful purposes.
Indigenous Energy	Refers to all energy forms produced/ sourced from within the country's natural resources.
Installed Capacity	The total of the capacities shown on the nameplates of the generating units in a powerplant.
Renewable Energy	Energy generated from natural resources which are naturally replenished. It includes solar power, wind power, hydroelectricity, micro hydro, biomass and biofuels.
Run of Mine	Coal directly coming from the mine.
Total Final Energy Consumption (TFEC)	The sum of all energy forms consumed/used by different economic sectors.
Total Primary Energy Demand (TPED)	The sum of total final consumption, power generation, other energy sector (own use and losses).
Total Primary Energy Supply (TPES)	The sum of all energy derived from domestic sources (indigeneous, renewable), imported from outside the country, stock change (+/-) and export (-).
